

Currency Converter

User Guide

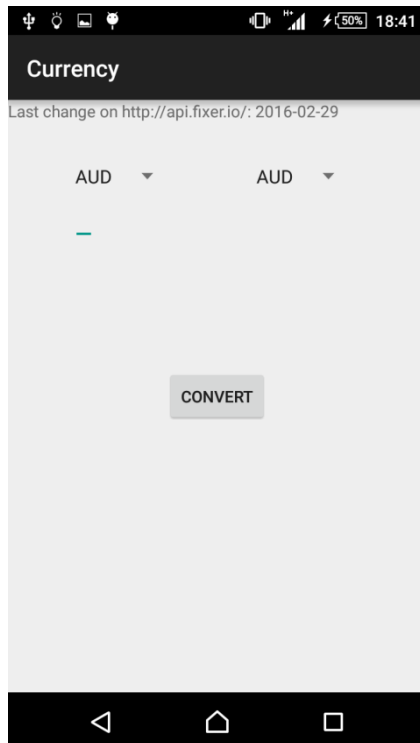

1.First application run

On the First run of application, will download update you should wait for “Loading...” ends (it can took a while)

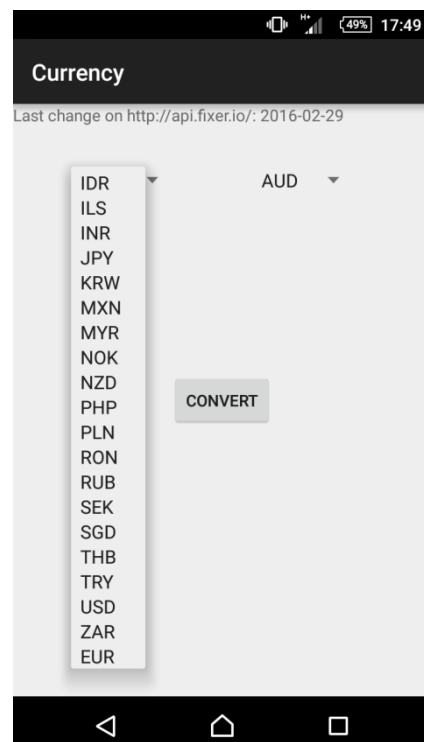

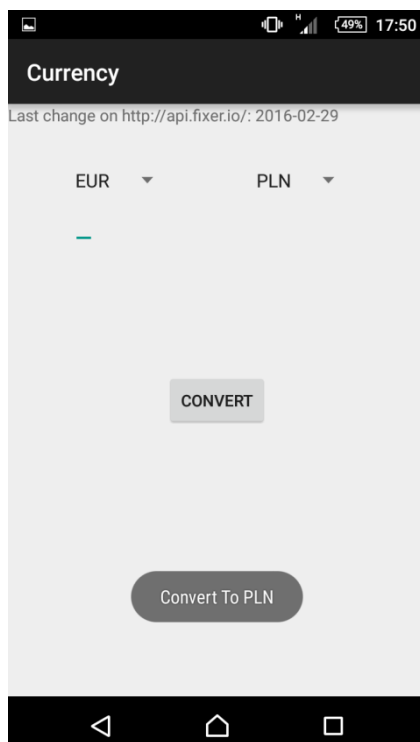

2. Application ready to use

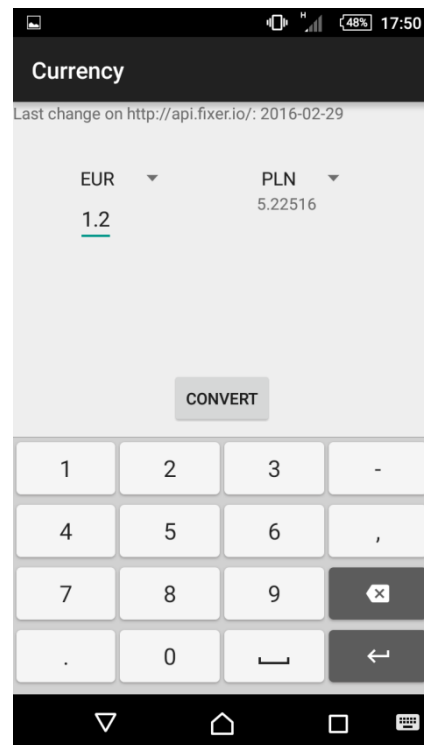

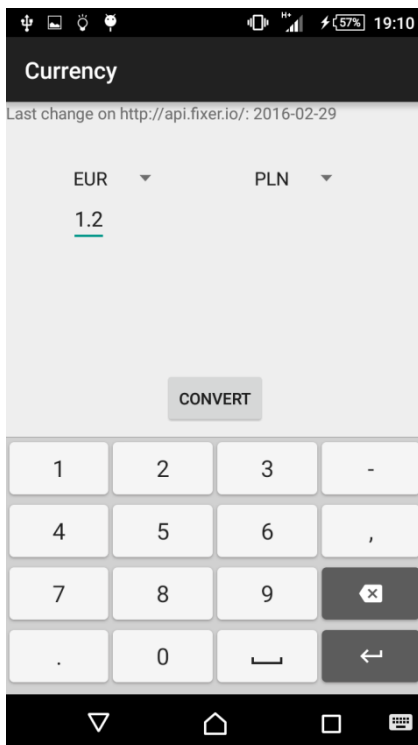

When „Loading...” vanish you can start to use application. You can use application when “Loading..” is still on screen but you will have initial exchange rate.

In place where we see „EUR” we chose from the list what currency we want convert to. In place where we see “PLN” we chose from the list to what currency we want to convert.

When you finish choosing, type value you want to convert and press button “CONVERT” (keyboard will appear when you touch edit text field).

3.Bad type of data

When you type value in bad format application will show you information “You have entered bad value”
